

Adjust IIS Server Settings

Adjust IIS Settings

The screenshot shows the 'Default Web Site Properties' dialog box in Windows Server 2003. The 'Home Directory' tab is selected, and the 'Local path' is set to 'C:\www'. The 'Read' and 'Directory browsing' checkboxes are checked. A 'Browse For Folder' dialog is also open, showing the 'www' folder selected in the 'Program Files' directory.

- Right click the IIS Icon
- Choose “Open”
- Find the “Default Web Site” under “NS1 (local computer)” in the “Web Sites” folder
- Right click the “Default Web Site”
- Choose “Properties”
- Click the “Home Directory” tab
- Click “Browse”
- Change the “Local Path” to C:\www
- Make sure the “Read” checkbox is TRUE
- Make sure the “Directory browsing” checkbox is TRUE

Adjust IIS Settings
